Why QuizCraft?

02

Key value delivered by the application

● TIME SAVING

Automates quiz creation from study material.

● USER FRIENDLY

A clean interface keeps the workflow simple.

● INSTANT RESULTS

Score and percentage are calculated immediately.

● QUIZ HISTORY

Results can be stored for later review.

The Problem

03

What does our app solve?

● Too much study material

Long PDFs and large notes can be overwhelming to review.

● No instant feedback

Learners may wait too long to know whether answers are correct.

● Manual quiz making

Creating questions manually is repetitive and time consuming.

● No quick self-assessment

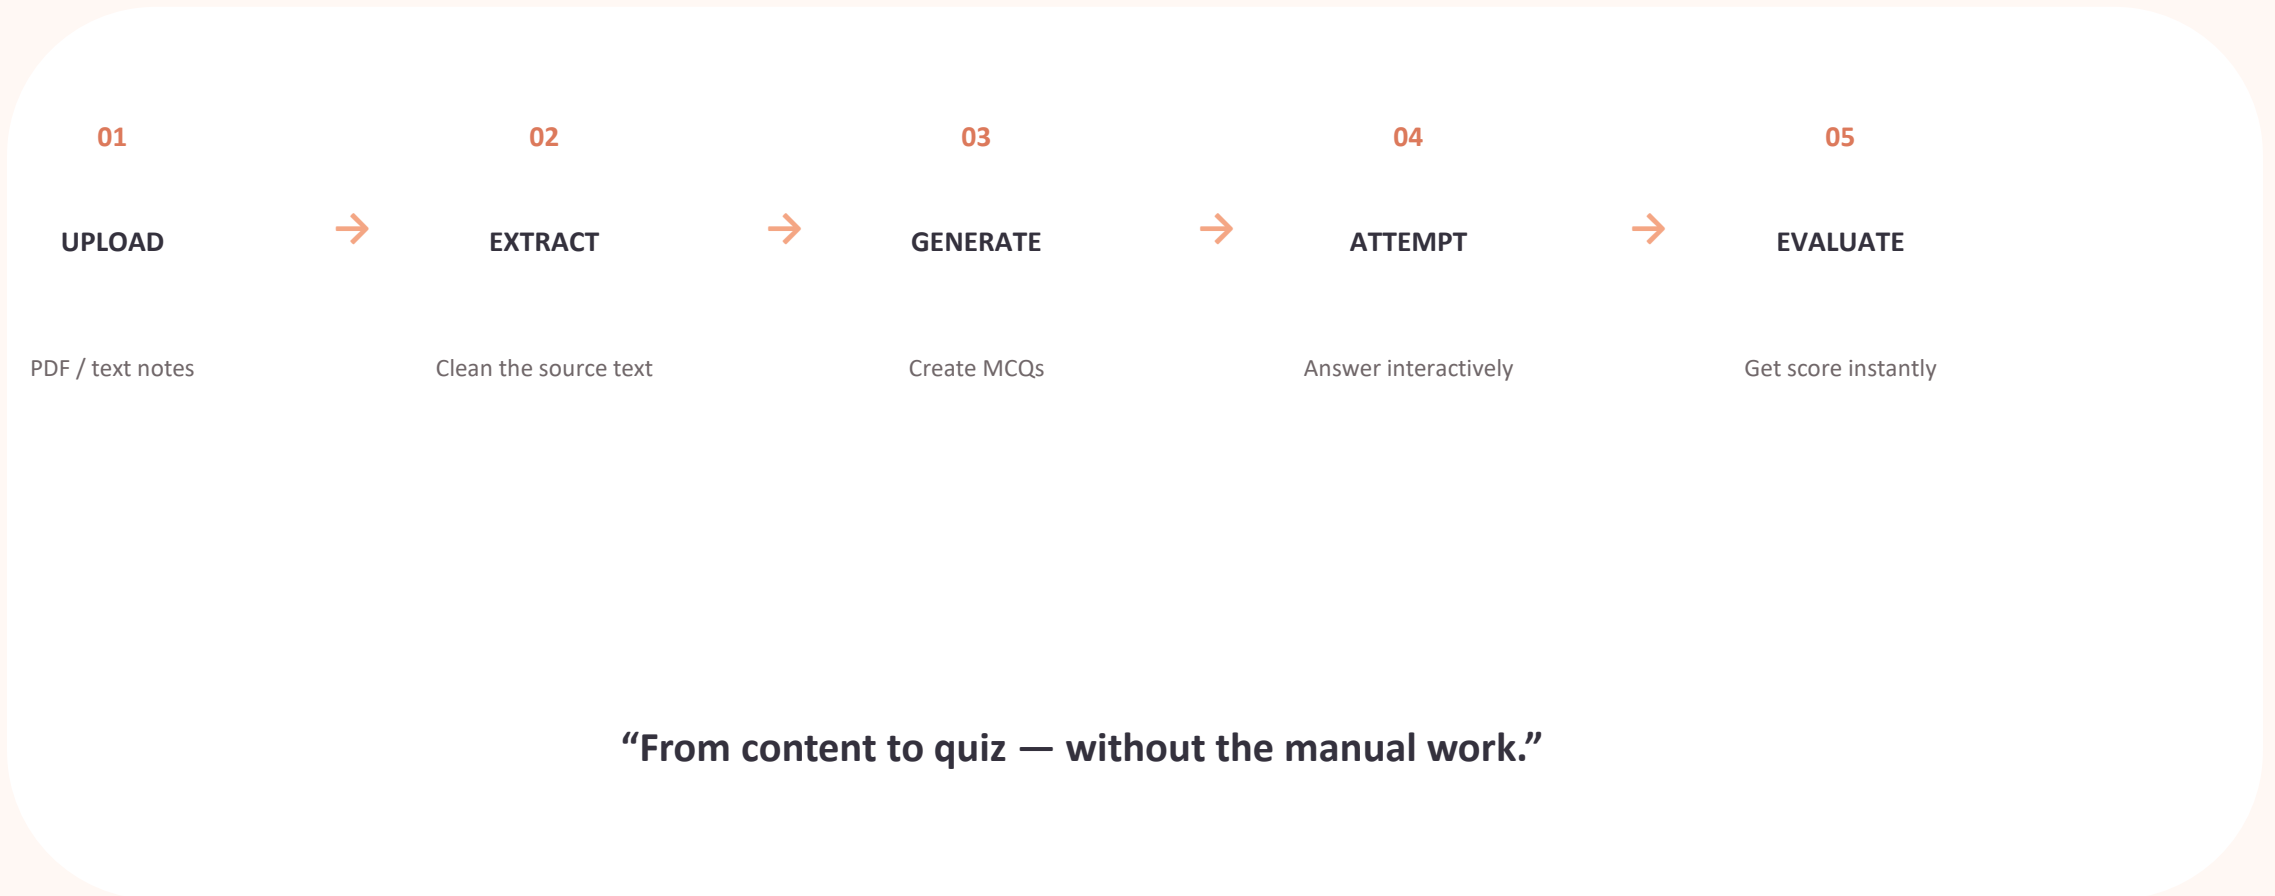

Students need a faster way to test understanding.

Solution → Turn PDF / Text notes into an instant MCQ quiz

Our Solution

04

QuizCraft converts study content into an interactive MCQ experience

Technology Stack

Core technologies powering the application

● Python

Backend language, core logic & data processing

● Streamlit

Web app framework, interactive UI & dashboard

● SQLite

Lightweight database for quizzes & user data

● PyPDF

Extract text from uploaded PDFs

● Regex / NLP

Pattern matching and text analysis

● Custom CSS

Responsive styling and clean UI design

QuizCraft — System Architecture

06

End-to-end quiz generation & evaluation flow

01

USER INPUT

Text or PDF

02

TEXT EXTRACTION

PyPDF + clean_text

03

CONCEPT EXTRACTION

Regex pattern matching

04

QUIZ GENERATION

Generate_quiz

05

STREAMLIT UI

Interactive quiz

06

EVALUATION

Score + percentage

07

DATABASE

SQLite history

Live Demo & Deployed Link

DEMO

Challenges Faced

Practical implementation challenges and how the project handles them

● PDF Extraction

Different PDFs can have different layouts. PyPDF is used before cleaning and preprocessing.

● Question Generation

Extracted text must be converted into meaningful MCQs using regex pattern matching.

● Instant Evaluation

The quiz calculates score and percentage immediately after an attempt.

● Database Handling

Quiz information and history are stored in SQLite for later access.

● Clean Interface

Streamlit keeps the complete flow simple and easy to use.

Our Role in the Project

09

From planning to implementation and presentation

● PROJECT PLANNING

Identified the problem • defined the solution flow • organized presentation structure • connected features to user needs

● IMPLEMENTATION FLOW

PDF / text input • extraction & cleaning • concept extraction • MCQ generation • quiz evaluation • SQLite history

● DEMO & PRESENTATION

Explained the technology stack • presented system architecture • prepared live demo • showed deployed application

Future Improvements

Planned directions for extending QuizCraft

● More Question Types

Expand beyond the current MCQ generation flow.

● Better Text Processing

Handle complex PDFs and noisy extracted text more effectively.

● More Input Formats

Support additional study-material formats.

● Progress Analytics

Add topic-wise performance and progress tracking.

● Personal Accounts

Give learners individual profiles and quiz history.

● Larger Question Bank

Save and reuse generated questions across quizzes.
